Little lime North with Norte would hush it up (Cayo Romano), West with Punta Arenilla, East with Yellow Caña (Mines) and South with Glory (Cubitas's Saw). The ones that go to the beaches prepare to confront the reverberant sunshine on the high-temperature sand and enjoy the wind and saltpeter, something that it is in our genes like islanders of The Caribbean. Place between fishers and summer resorters where a little community was promoted, once their entrance for the islets of Cayo Guajaba was leant to the bottom of the interior bay of Glory, protégée and Cayo Romano.

The pilot port enrolls in the history of the first communities settled in the zone, although his real name is Pilot Punta since he does not have any port. One of the main tourist credits of the municipality Saws of Cubitas

Count on a restaurant, a store of industrial products, 2 barges for the enjoyment of the vacationists and inhabitants.
